

Weather instruments that set the standard

Technical precision and timeless elegance have been the hallmark of Maximum weather instruments from the very beginning. Choose from a wide selection of digital and analog instruments that let you monitor wind speed, wind direction, temperature, barometric pressure, humidity and more. Each instrument is made in the U.S.A. and backed by Maximum's 5-year limited warranty.

Vigilant

Nor'easter is a 2-digit wind speed instrument powered by AC or by 9V battery, and housed in a light wood block. Displays wind speed from 0-99 MPH and can be factory calibrated to read in km/h, m/s or Knots. The back is key-holed for wall mounting. Includes 60' cable, wind speed sensor, AC adapter and mounting hardware. 9V battery is not included.

Nor'easter

Nor'easter Repeater acts as a secondary, 2-digit readout for wind speed from any wired Maximum analog wind instrument. Connects to the back of Maestro, Maestro 2-S, Vigilant, Sirocco or another Nor'easter, and can be located up to 60' from the primary wind speed instrument. Includes 60' cable and AC adapter. Does not include sensor or mounting hardware.

Nor'easter Repeater

Sirocco is a self-powered anemometer that registers wind speed up to 100 MPH. Mounted in a mahogany-stained hardwood block and factory calibrated to +/-3% of full scale for accuracy. Can be wall mounted or set on any horizontal surface. Includes 60' cable, wind speed sensor and mounting hardware.

Sirocco

Vigilant is the instrument that Maximum was founded upon. It displays wind speed from 0-100 MPH and 0-160 km/h, as well as highest (or "Maximum") gust. High gust is saved with our unique Gust Register, allowing you to monitor the highest gust even if you're not present when the wind occurs. Vigilant is self-powered by a rooftop sensor and requires no batteries or other power source to operate. Includes 60' cable, wind speed sensor and mounting hardware.

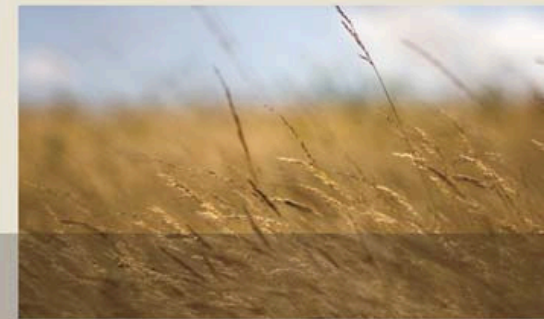

When used with the optional scale doubling switch, Vigilant can record wind speed up to 200 MPH. Contact Maximum for details.
