

DATA SHEET

PITOT TUBE

NPL type (L / straight)

Large range of type L Pitot tubes

Better than 1% for an alignment in relation to the flow axis of the fluid of $\pm 10^\circ$

High quality and accuracy

Made according to AFNOR NF ISO 3966

Sauermann offers a broad range of **Pitot tubes** of great quality and accuracy realised according to the NF ISO 3966 norm.

The Sauermann **Pitot tubes**, connected to a differential column of liquid manometer, with needle or electronic, enable to measure the dynamic pression of a fluid in movement in a pipe and determine its speed in m/s and its flow in m³/h.

The **Pitot tubes** are used in climatic engineering, ventilation, dust-removal and pneumatic transport. They are particularly adapted for measurement in warm air, charged with particles and for high speed.

Description

Pitot tube L type

Pitot tubes with ellipsoidal top.
A total pressure port and six holes of static pressure.
Body in full stainless steel.

Pitot tube L type with K thermocouple

Pitot tubes with ellipsoidal top.
A total pressure port and six holes of static pressure.
K thermocouple probe lined integrated with connecting cable of 1.5 meter long.
Body in full stainless steel.

Pitot tube straight type & straight type with K thermocouple

It enables to carry out measurement directly by immersing the tube in the air-diffusing equipment.
Diameter and dimensions: same as the NPL curved Pitot.

Technical features

Model	AFNOR NF
Coefficient	1.0015 ±0.01
Material	Inox 316 L
Measuring range	3 to 85 m/s
Operating temperature	From 0 to 600°C in standard and up to 1000°C in option
Static pressure	2 bar maximum in static Hereafter on request
Global accuracy of the measurement system	Better than 1% for an alignment in relation to the flow axis of the fluid of ±10°
Standards	NF ISO 3966

Presentation of the range

• Pitot tubes L type and straight type

Diameter	Reference L type	Reference straight type	Length
Ø3 mm	TPL-03-100	TPL-D-03-100	100 mm
	TPL-03-200	TPL-D-03-200	200 mm

Pitot tube Ø14 mm	25	50	16	70	112	224	42

All dimensions and ratings of this document are specified in mm.

Accessories

Name	Reference
Gland in plated brass for the installation of Pitot tubes for fixed station	x
Mounting flange stainless steel and cast iron	x
Sliding connections with stainless steel turn or PTFE	x
Extension cable for K thermocouple class 1	x
Stopper cap in caoutchouc: bag of 10 pieces	x
Caps: bag of 10 pieces	x
Black silicone tube (4 x 7 mm)	SN-47-1
Transparent silicone tube (4 x 7mm)	SB-47-1
Crystal tube (5 x 8 mm)	C-58-1
Plastic transport case type VTP for pitot tube and/or probe with a maximum size of 110 cm x 20 cm x 4 cm.	VTP / 23370
Junctions in Y for a tube Ø5 x 8 mm (bag of 10)	J.Y.C
Junctions in T for a tube Ø5 x 8 mm (bag of 10)	J.T.C

For every other cases, Sauer mann offers special realisations. Consult us, we intervene on plans study, machining.

Operating principle

The **Pitot tube** is introduced perpendicularly in the pipe by pre-determined points (cf. "Measurement").
 The antenna composed of an ellipsoidal nose (bow) maintained in parallel and in front of the flow to control.
 The total pressure (+) is picked up by the bow and is connected to the + sign of the manometer.
 The static pressure (-) picked up by the small holes located around the antenna is connected to the - sign of the manometer.
 The connecting cable of the K thermocouple is connected to the input K of the manometer (for the **Pitot tube type L with K thermocouple**).

The device then indicates the dynamic pressure, sometimes called speed pressure.

The dynamic pressure corresponds to the difference between total pressure and static pressure: **$Dp = Tp - Sp$**

Application

- GTC Record
- GTC Analyze

Low differential pressure transmitter sensor
CP210 and SQR/3

- Alarm
- Visualize
- Operate
- GTC Record
- GTC Analyze
- Live monitoring

Low differential pressure transmitter sensor with digital display
C310 or CA 310 with SPI 2 – 100, 500, 1000, 10000 and SQR/3

- Alarm
- Visualize
- Record
- Analyze
- Live monitoring

Multifunction intelligent portable
AMI 310

Measurement

- Punctual velocity measurement

$$V = C_F \sqrt{\frac{2 \Delta P}{\rho}} \quad \rho = \frac{P_0}{287.1 \times (\Theta + 273.15)}$$

With:

C_F : coefficient of the flow device element
 Pitot tube L : $C_F = 1.0015$

Θ : given temperature (°C)

P_0 : given atmospheric pressure (Pa)

- Air flow measurement

Average (A) of several measurements of punctual velocity according to Log-Tchebychev (see measurement scheme above).

Air flow calculation

Flow = Velocity_A x Surface x 3600

Surface: surface of the circular or rectangular sheath in m²

N.B: in the electronic devices, the surface is automatically adjustable.

With:

Flow: in m³/h

Surface: in m²

V_A: in m/s

Log-Tchebychev in 3 points
